

## **2014-2015 Community Influenza Surveillance Report Update of Current Status February 3, 2015**

**Overall assessment:** Influenza activity in Middlesex-London is higher compared to the previous week. This may be due to increased testing and a corresponding increase in the detection of illness, or it may reflect a true rise in the number of influenza infections occurring in the community.

### **Local Activity:**

From January 25<sup>th</sup> to 31<sup>st</sup>, 2015, 40 laboratory-confirmed cases of influenza A and one laboratory-confirmed influenza B case were reported. Among these cases, there were 14 hospitalizations and no deaths reported to the Health Unit.

Since September 1<sup>st</sup>, 2014, there has been a total of 162 confirmed influenza A cases and two influenza B cases reported, 59 of whom have been hospitalized, and five of whom have died.

In addition, five laboratory-confirmed influenza outbreaks were declared last week; influenza A was identified in four of these outbreaks, and both influenza A and influenza B were identified in one outbreak. Since September 1<sup>st</sup>, 2014, there have been 25 influenza outbreaks declared in Middlesex-London facilities.

Appendix A provides more details about laboratory-based influenza activity indicators, as well as other local indicators of respiratory illness. A graph showing all 164 laboratory-confirmed cases by week is provided in Appendix B, at the end of this report.

### Summary of Community Influenza Surveillance Indicators for Middlesex-London February 3, 2015

**Table 1: Summary of laboratory-based influenza activity indicators, Middlesex-London and Ontario, 2014-2015 influenza surveillance season**

Indicator	Current Reporting Period	Number Reported: <i>Current Reporting Period</i>	Number Reported: <i>Year to Date (from September 1, 2014)</i>	Recent Trends
<b>Laboratory-confirmed cases<sup>1</sup></b>	Jan. 25-31	Influenza A – 40 cases Influenza B – 1 case	Influenza A – 162 cases Influenza B – 2 cases	<b>Higher</b> compared to the previous week (Jan. 18-24), when 28 influenza A cases and 1 influenza B case were reported.  <b>Please note that the week in which cases are reported does not necessarily reflect the date of onset of illness.</b>
<b>Influenza sub-types<sup>1</sup></b>	Jan. 25-31	Influenza A(H3) – 6 cases	Influenza A(H3) – 38 cases Not subtyped – 124 cases	All influenza A strains subtyped to date have been influenza A(H3).  One sample has been typed as A/Switzerland/9715293/2013-like, which is not a component of the 2014-2015 seasonal influenza vaccine.
<b>Hospitalizations<sup>1</sup></b>	Jan. 25-31	14	59	<b>Higher</b> compared to the previous week (Jan. 18-24) when 11 hospitalizations were reported.
<b>Deaths<sup>1</sup></b>	Jan. 25-31	0	5	<b>Similar</b> to the previous week (Jan. 18-24) when one death was reported among people with laboratory-confirmed influenza.
<b>Influenza outbreaks in long-term care homes/retirement homes/acute care</b>	Jan. 25-31	Influenza A – 4 outbreaks Influenza A & B – 1 outbreak Influenza B – 0 outbreaks	Influenza A – 24 outbreaks Influenza A & B – 1 outbreak Influenza B – 0 outbreaks	<b>Higher compared</b> to the previous week (Jan. 18-24) when three outbreaks were declared in facilities.
<b>Percentage of samples that are positive for influenza (Ontario)<sup>2</sup></b>	Jan. 18-24	Influenza A – 31.6% positivity Influenza B – 0.2% positivity	N/A	Influenza A: <b>Higher</b> compared to 30.2% reported the previous week (Jan. 11-17). Influenza B: <b>Similar</b> to 0.4% positivity reported the previous week (Jan. 11-17).

**Notes:**

1 Numbers are subject to change week by week due to the retrospective nature of reporting.

2 Public Health Ontario, Ontario Respiratory Virus Bulletin 2014-2015

**Table 2: Summary of community-based respiratory illness indicators, Middlesex-London, 2014-2015 influenza surveillance season**

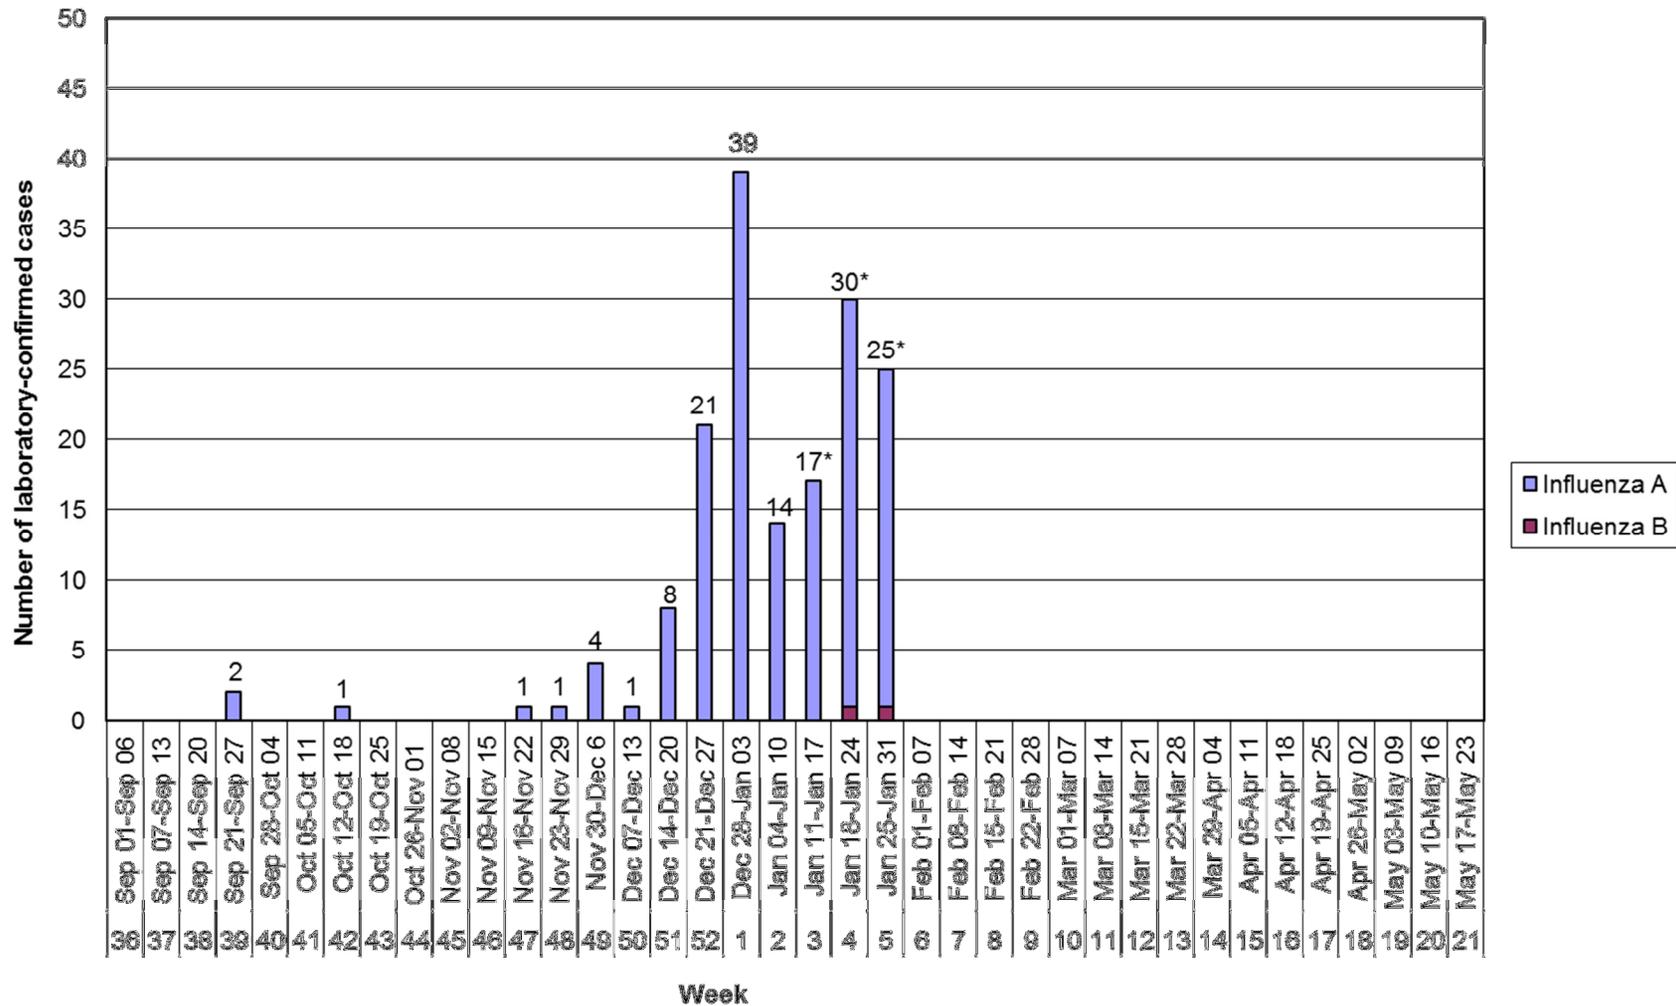

Indicator	Current Reporting Period	Number Reported: <i>Current Reporting Period</i>	Recent Trends
<b>Hospital emergency room reports regarding the percentage of patients with fever and respiratory illness</b>	Jan. 25-31	<p>Between January 25<sup>th</sup> and 31<sup>st</sup>, an average of 12.4% of patients at London Health Sciences Centre (LHSC) Emergency Departments and the St. Joseph's Health Care (SJHC) Urgent Care Centre presented with fever and respiratory symptoms.</p> <p>The proportion was highest at the paediatric emergency department, where 30.9% of patients presented with a fever and respiratory symptoms.</p>	<p>The percentage of patients presenting to hospital emergency departments with fever and respiratory symptoms from all LHSC sites and SJHC combined was <b>higher</b> than the 10.9% reported the previous week (Jan. 18-24).</p> <p>The percentage of patients presenting with fever and respiratory symptoms at the paediatric emergency department was <b>higher</b> than the 27.7% reported the previous week (Jan. 18-24).</p>
<b>Absence reports from elementary schools (i.e., absenteeism &gt; 10%)</b>	Jan. 26-30	Between January 26 <sup>th</sup> and 29 <sup>th</sup> , 28 elementary schools from one school board reported a four-day average absenteeism rate exceeding 10%.	The number of schools reporting an average absenteeism rate exceeding 10% was <b>higher</b> than the previous week (Jan. 12-15), when 13 schools reported increased absenteeism.
<b>Sentinel X-ray provider reports regarding newly identified bronchopneumonia cases</b>	Jan. 26-31	From January 26 <sup>th</sup> to 31 <sup>st</sup> , 3.1% of chest x-rays performed were newly diagnosed bronchopneumonia cases.	The proportion of newly diagnosed bronchopneumonia cases was <b>lower</b> than the 5.0% reported the previous week (Jan. 19-24).
