

## 2014-2015 Community Influenza Surveillance Report Update of Current Status February 23, 2015

**Overall assessment:** Influenza activity in Middlesex-London is lower compared to the previous week.

### Local Activity:

From February 15<sup>th</sup> to 21<sup>st</sup>, 2015, 21 laboratory-confirmed cases of influenza A and one laboratory-confirmed case of influenza B were reported. Among these cases, there were 9 hospitalizations. No deaths were reported to the Health Unit in the most recent week.

Since September 1<sup>st</sup>, 2014, there has been a total of 262 confirmed influenza A cases and four influenza B cases reported, 106 of whom have been hospitalized, and six of whom have died.

In addition, two laboratory-confirmed influenza A outbreaks were declared last week. Since September 1<sup>st</sup>, 2014, there have been 32 influenza outbreaks declared in Middlesex-London facilities.

Appendix A provides more details about laboratory-based influenza activity indicators, as well as other local indicators of respiratory illness. A graph showing all 266 laboratory-confirmed cases by week is provided in Appendix B, at the end of this report.

## Appendix A

### Summary of Community Influenza Surveillance Indicators for Middlesex-London February 24, 2015

**Table 1: Summary of laboratory-based influenza activity indicators, Middlesex-London and Ontario, 2014-2015 influenza surveillance season**

<b>Indicator</b>	<b>Current Reporting Period</b>	<b>Number Reported: <i>Current Reporting Period</i></b>	<b>Number Reported: <i>Year to Date (from September 1, 2014)</i></b>	<b>Comparison to Previous Week</b>
<b>Laboratory-confirmed cases<sup>1</sup></b>	Feb. 15-21	Influenza A – 21 cases Influenza B – 1 case	Influenza A – 262 cases Influenza B – 4 cases	<b>Lower</b> compared to the previous week (Feb. 8-14), when 33 influenza A cases were reported.  <b>Please note that the week in which cases are reported does not necessarily reflect the date of onset of illness.</b>
<b>Influenza sub-types<sup>1</sup></b>	Feb. 15-21	Influenza A(H3) – 5 cases	Influenza A(H3) – 54 cases Not subtyped – 208 cases	All influenza A strains subtyped to date have been influenza A(H3).  One sample has been typed as A/Switzerland/9715293/2013-like, which is not a component of the 2014-2015 seasonal influenza vaccine.
<b>Hospitalizations<sup>1</sup></b>	Feb 15-21	9	106	<b>Lower</b> compared to the previous week (Feb 8-14) when 16 hospitalizations were reported.
<b>Deaths<sup>1</sup></b>	Feb 15-21	0	6	<b>Same</b> as the previous week (Feb. 8-14) when no deaths were reported among people with laboratory-confirmed influenza.
<b>Influenza outbreaks in long-term care homes/retirement homes/acute care</b>	Feb 15-21	Influenza A – 2 outbreaks Influenza B – 0 outbreaks	Influenza A – 31 outbreaks Influenza A & B – 1 outbreak Influenza B – 0 outbreaks	<b>Same</b> as the previous week (Feb. 8-14) when two outbreaks were declared in facilities.
<b>Percentage of samples that are positive for influenza (Ontario)<sup>2</sup></b>	Feb. 8-14	Influenza A – 21.6% positivity Influenza B – 1.5% positivity	N/A	Influenza A: <b>Lower</b> compared to 27.2% reported the previous week (Feb. 1-7). Influenza B: <b>Higher</b> compared to 0.6% positivity reported the previous week (Feb. 1-7).

**Notes:**

1 Numbers are subject to change week by week due to the retrospective nature of reporting.

2 Public Health Ontario, Ontario Respiratory Virus Bulletin 2014-2015

**Table 2: Summary of community-based respiratory illness indicators, Middlesex-London, 2014-2015 influenza surveillance season**

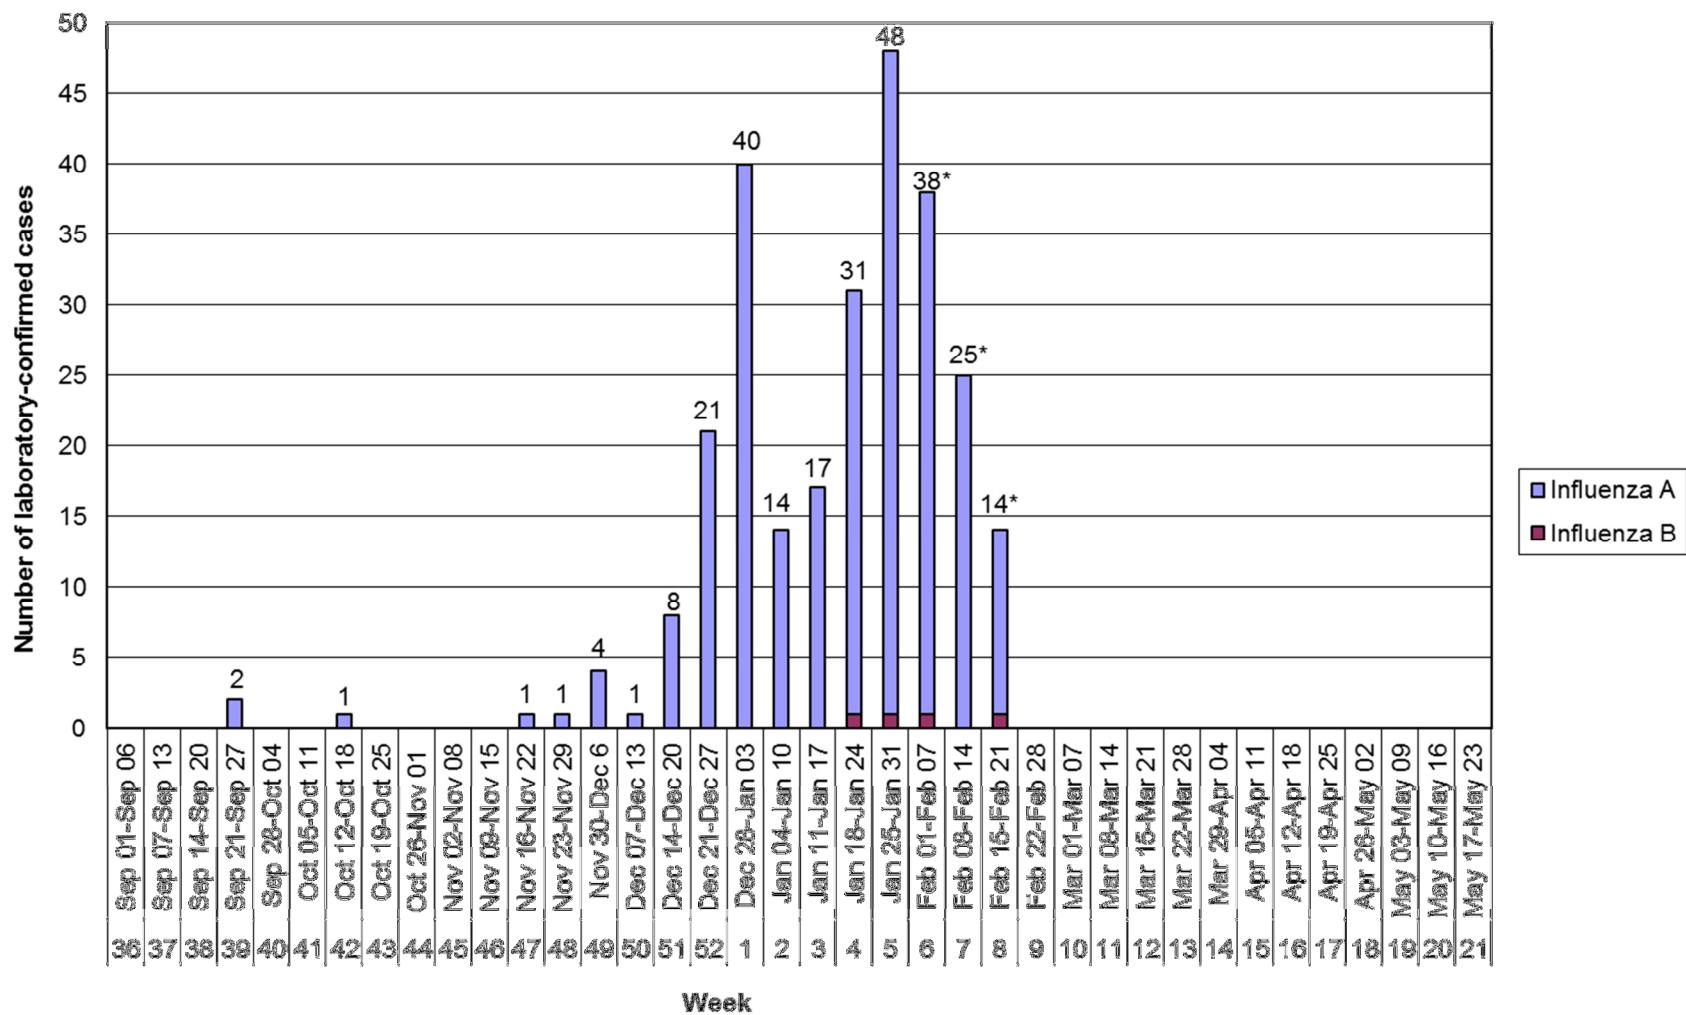

Indicator	Current Reporting Period	Number Reported: <i>Current Reporting Period</i>	Comparison to Previous Week
<b>Hospital emergency room reports regarding the percentage of patients with fever and respiratory illness</b>	Feb. 15-21	<p>Between February 15<sup>th</sup> and 21<sup>st</sup>, an average of 9.4% of patients at London Health Sciences Centre (LHSC) Emergency Departments and the St. Joseph's Health Care (SJHC) Urgent Care Centre presented with fever and respiratory symptoms.</p> <p>The proportion was highest at the paediatric emergency department, where 25.2% of patients presented with a fever and respiratory symptoms.</p>	<p>The percentage of patients presenting to hospital emergency departments with fever and respiratory symptoms from all LHSC sites and SJHC combined was <b>similar</b> to the 9.7% reported the previous week (Feb. 8-14).</p> <p>The percentage of patients presenting with fever and respiratory symptoms at the paediatric emergency department was <b>higher</b> than the 23.7% reported the previous week (Feb. 8-14).</p>
<b>Absence reports from elementary schools (i.e., absenteeism &gt; 10%)</b>	Feb. 17-20	Between February 17 <sup>th</sup> and 20 <sup>th</sup> , 31 elementary schools from one school board reported a four-day average absenteeism rate exceeding 10%.	The number of schools reporting an average absenteeism rate exceeding 10% was <b>higher</b> than the previous week (Feb. 9-13), when 18 schools reported increased absenteeism.
<b>Sentinel X-ray provider reports regarding newly identified bronchopneumonia cases</b>	Feb. 17-21	From February 17 <sup>th</sup> to 21 <sup>st</sup> , 3.8% of chest x-rays performed were newly diagnosed bronchopneumonia cases.	The proportion of newly diagnosed bronchopneumonia cases was <b>higher</b> than the 2.3% reported the previous week (Feb. 9-14).
