
2016-2017 Community Influenza Surveillance Report Update of Current Status January 24, 2017

Overall assessment

The current level of influenza activity in Middlesex-London is lower than in the previous week.

Current Local Activity

Between January 15th and 21st, there were 20 cases of laboratory-confirmed influenza A reported to the Middlesex-London Health Unit, of whom three were hospitalized and one died. In addition, one facility outbreak of influenza A was declared.

Since September 1st, 2016, 219 laboratory-confirmed cases of influenza have been reported. To date, one case has been identified as influenza B; all other cases have been identified as influenza A. Of the influenza A cases that have been subtyped, all 64 have been identified as influenza A(H3). Also, there have been 24 influenza A outbreaks declared in facilities located in the Middlesex-London area.

Appendix A provides more details about laboratory-based influenza activity indicators, as well as other local indicators of respiratory illness. A graph showing all 219 laboratory-confirmed cases by week is provided at the end of this report in Appendix B. Appendix C provides a graph showing all institutional influenza outbreaks by week and institution type.
