

2021-2022 Community Influenza Surveillance Report Update of Current Status June 29th, 2022

Final Report of the 2021-2022 Season

This is the final *Community Influenza Surveillance Report* of the 2021-2022 influenza season. Influenza continues to be appearing sporadically both locally and nationally during this unusually late influenza season. Local influenza surveillance and reporting for London and Middlesex County will resume in the fall of 2022.

Overall Assessment

Influenza continues to circulate in London and Middlesex County. Although the level of activity is declining and remains low, it is above what has come to be expected during a typical influenza season at this time of year. Nearly two-thirds (65%) of Ontario's public health units continue to report localized or sporadic influenza activity. So far this season, there have been 1,672 confirmed cases of influenza reported in Ontario (1,660 influenza A, 12 influenza B).

Analysis and Action

Regardless of the level of local influenza activity, there are a number of easy-to-follow steps residents can take to avoid becoming sick throughout the year. Washing your hands frequently with soap and warm water for 15-20 seconds or using a waterless hand sanitizer (with at least 70 percent alcohol content), remains an effective way to prevent many illnesses, including influenza. Local residents are also advised to continue following these prevention practices to further reduce the potential for viruses to spread:

- Cough or sneeze into your elbow,
- Avoid touching your eyes, nose and mouth,
- Clean and disinfect high-touch surfaces, such as doorknobs, handrails, countertops, etc. frequently, and
- Stay home when you feel sick.

Details of Current Local Activity

Between June 19th and June 25th, there was one laboratory-confirmed case of influenza A and no cases of influenza B reported to the Health Unit. This brings the total number of influenza A cases reported since surveillance began on August 29th, 2021, to 50.

Appendix A provides more detail about laboratory-based influenza activity indicators for the current reporting week, as well as other local indicators of respiratory illness.

Provincial and National Comparison

In this week's *Ontario Respiratory Pathogen Bulletin*, Public Health Ontario reports that influenza activity in health units across the province was similar to the previous week. In the most recent week, 70 confirmed cases of influenza A and no confirmed cases of influenza B were reported in Ontario. This is lower than the 85 cases of influenza reported across Ontario in the previous week.

In this week's *FluWatch* and *Respiratory Virus Report*, the Public Health Agency of Canada noted that influenza A activity continues to decline but remains above typical seasonal thresholds with influenza activity being reported in most regions of Canada. Based on the declining number of influenza cases being detected in recent weeks, Canada is nearing the end of its 2021-2022 late onset influenza season.

Appendix A

Summary of Community Influenza Surveillance Indicators for Middlesex-London June 19th to June 25th, 2022

Table 1: Summary of laboratory-based influenza activity indicators, Middlesex-London and Ontario, 2021-2022 influenza surveillance season

Indicator	Reporting Period	Number Reported: <i>Current Reporting Period</i>	Number Reported: <i>Year to Date</i> <i>(from August 29, 2021)</i>	Recent Trends
Laboratory-confirmed cases ^{1,4}	June 19-June 25 (week 25) ²	Influenza A – 1 case Influenza B – 0 cases	Influenza A – 50 cases Influenza B – 0 cases	Influenza A: Same as the previous week (June 12-18) when one case was reported. Influenza B: Same as the previous week (June 12-18) when no cases were reported.
Influenza sub-types ¹	June 19-June 25	Influenza A (H3) – 0 cases Influenza A not yet subtyped – 1 case	Influenza A (H3) – 10 cases Influenza A not yet subtyped – 40 cases	N/A
Hospitalizations ^{1,5}	June 19-June 25	1	20	Same as the previous week (June 12 – 18) when one hospitalization was reported.
Deaths ^{1,5}	June 19-June 25	0	0	Same as the previous week (June 12 – 18) when no deaths were reported.
Influenza outbreaks in long-term care homes/retirement homes/acute care	June 19-June 25	Influenza A – 0 outbreaks Influenza B – 0 outbreaks	Influenza A – 1 outbreak Influenza B – 0 outbreaks	Same as the previous week (June 12 – 18) when no outbreaks were reported.
Percentage of samples that are positive for influenza (Ontario) ³	June 12-June 18 (week 24) ²	Influenza A – 2.0% positivity Influenza B – 0.0% positivity	N/A	Influenza A: Lower than 4.5% positivity reported the previous week (June 5-11). Influenza B: Same as 0% positivity reported the previous week (June 5-11).

Notes:

1 Numbers are subject to change week by week due to the retrospective nature of reporting.

2 Weekly influenza monitoring often uses numbered weeks from 1 to 52 weeks per year. A reference week calendar can be found at <https://www.canada.ca/en/public-health/services/diseases/flu-influenza/influenza-surveillance/fluwatch-weeks-calendar.html>

3 Public Health Ontario, [Ontario Respiratory Pathogen Bulletin](#) 2021-2022. Numbers reported represent results submitted to CIRID from 17 participating labs in Ontario and does not include all testing laboratories, [ORPB Interactive Website Data Caveats and Glossary](#)

4 The week cases are reported to the Health Unit may not be the same as week of illness onset.

5 The week hospitalizations and deaths are reported to the Health Unit may not be the same as the week in which they occurred, or the same as the week of illness onset.

Table 2: Summary of community-based respiratory illness indicators, Middlesex-London, 2021-2022 influenza surveillance season

Indicator	Reporting Period	Number Reported: <i>Current Reporting Period</i>	Recent Trends
Middlesex-London hospital emergency department visits - percentage of patients with respiratory or fever symptoms¹	June 19-June 25	An average of 9.6% of patients presented with respiratory symptoms. An average of 3.9% of patients presented with influenza-like illness (fever) symptoms.	Lower than 11.5% reported the previous week (June 12-18). Similar to 3.5% reported the previous week (June 12-18).
Real-time Viral Respiratory Surveillance² - Middlesex-London	June 19-June 25	Activity/Risk Level: Moderate or Yellow (Increased visit volumes to Emergency Departments and absenteeism may be noted).	Same as level (Moderate or Yellow) reported the previous week (June 12-18).

¹ [Acute Care Enhanced Surveillance](#) (ACES) Application is a real-time syndromic surveillance system. This source will be influenced by COVID-19 activity.

² [Viral Respiratory Mapper](#) uses data from ACES (above). Activity/Risk Levels range from Green, Yellow, Orange and Red.
