

Middlesex-London Respiratory Surveillance Report

Last updated: 2023-11-28 12:00 PM

The data in this dashboard represent a snapshot in time and are subject to change as public health investigations into reported cases continue, and as ongoing data quality updates are undertaken, such as correcting for missing or overcounted cases and deaths. The number of cases reported on any given day may change as cases may be referred between jurisdictions or, following further investigation, individuals may no longer meet the case definition. The data shown here may differ from other sources as data may be extracted at different times. The dashboard will be updated every Tuesday at 12:00 PM, unless otherwise noted.

Respiratory summary

COVID-19 cases

Influenza cases

Other respiratory viruses

Wastewater surveillance

Institutional outbreaks

COVID-19 vaccination

Technical notes

Respiratory Transmission Risk Assessment

Middlesex-London region is in a High Risk Period for Respiratory Illness

Indicator	Status
1. Respiratory virus outbreaks in health care facilities	Frequent and ongoing
2. COVID-19 hospitalizations and ICU admissions	Stable
3. % positivity for COVID-19	High
4. Wastewater surveillance trend of COVID-19	High

COVID-19 Summary

Local metrics	Week 47 (Nov 19 - Nov 25, 2023)	Season to date (Aug 27 - Nov 25, 2023)	Trend (compared to previous week)
Laboratory-confirmed cases	106	1,471	Decreased
Deaths	0	23	Same
Active outbreaks	As of the end of Nov 27, 2023:		Decreased
Local test positivity	Percent of tests positive: 18.9% Positivity level: High		Decreased
Provincial metrics	Week 46 (Nov 12 - Nov 18, 2023)		
Provincial weekly indicator change	Higher		

Influenza Summary

Local metrics	Week 47 (Nov 19 - Nov 25, 2023)	Season to date (Aug 27 - Nov 25, 2023)	Trend (compared to previous week)
Laboratory-confirmed cases	6	21	Same
Influenza sub-types	Influenza A: 6 Influenza B: 0	Influenza A: 21 Influenza B: 0	Same Same
Deaths	0	0	Same
Active outbreaks	As of the end of Nov 27, 2023:		Increased
Provincial metrics	Week 46 (Nov 12 - Nov 18, 2023)		
Local influenza activity level	Activity level: Sporadic		
Provincial test positivity	Percent of tests positive: 2.9% Positivity level: Low		
Provincial weekly indicator change	Higher		

Clinical Syndromic Surveillance

Data are from the *Acute Care Enhanced Surveillance (ACES)*. ACES provides near real-time surveillance of emergency department (ED) visit records for approximately 95% of acute care hospitals in Ontario. Classifying algorithms are used to categorize each ED visit record into clinical syndromes according to information about the main reason for the visit listed in the record. Respiratory-related syndrome and influenza-like illness visits to Middlesex-London region hospitals (regardless of the client's health unit of residence) are shown below. For more details about each syndrome, please refer to the *Technical Notes*.

Weekly ED visits due to respiratory syndrome by age group in Middlesex-London

Weekly ED visits due to influenza-like illness (ILI) syndrome by age group in Middlesex-London
