*AIDS/HIV data for 2008 and 2009 is not currently available for Middlesex-London

NOTE

- These cases represent the STIs that have been reported to the health unit. Due to the fact that many STIs do not have symptoms, many Middlesex-London residents are not tested for STIs. These counts underestimate the true number of cases in this community.

DATA SOURCES

- Case counts are from queries of the integrated Public Health Information System (iPHIS) database maintained by the Middlesex-London Health Unit, run between December 2010 and March 2011.
