

Program Taxonomy

The MOHLTC Annual Service Plan (ASP) 2018 marked a significant shift in the way MLHU reported on programs and services delivered externally and internally to our community and staff. We previously reported by “team” and now we report by “program”. Teams represent administrative reporting structures that seek to best align people and the services they are delivering; however, planning as a team loses the specificity of having defined program outcomes. Moving forward, the MLHU will be planning at the programmatic level. The taxonomy with definitions can be found below.
