

# Middlesex-London Respiratory Surveillance Report

Last updated: 2024-03-12 12:00 PM

The data in this dashboard represent a snapshot in time and are subject to change as public health investigations into reported cases continue, and as ongoing data quality updates are undertaken, such as correcting for missing or overcounted cases and deaths. The number of cases reported on any given day may change as cases may be referred between jurisdictions or, following further investigation, individuals may no longer meet the case definition. The data shown here may differ from other sources as data may be extracted at different times. The dashboard will be updated every Tuesday at 12:00 PM, unless otherwise noted.

Respiratory summary

COVID-19 cases

Influenza cases

Other respiratory viruses

Wastewater surveillance

Institutional outbreaks

COVID-19 vaccination

Technical notes

## Respiratory Transmission Risk Assessment

Middlesex-London region is in a High Risk Period for Respiratory Illness

Indicator	Status
1. New respiratory outbreaks in health care facilities	Low
2. Respiratory hospitalizations	Low
3a. % positivity for COVID-19	Low
3b. % positivity for influenza	Low
4. Wastewater surveillance trend of COVID-19	High

## COVID-19 Summary

Local metrics	Week 10 (Mar 3 - Mar 9, 2024)	Season to date (Aug 27, 2023 - Mar 9, 2024)	Trend (compared to previous week)
Laboratory-confirmed cases	34	2,675	Increased
Deaths	2	53	Same
Active outbreaks	As of the end of Mar 11, 2024: 2		Decreased
Local test positivity	Percent of tests positive: 8.5% Positivity level: <b>Low</b>		Same
Provincial metrics	Week 09 (Feb 25 - Mar 2, 2024)		
Provincial weekly indicator change	Lower		

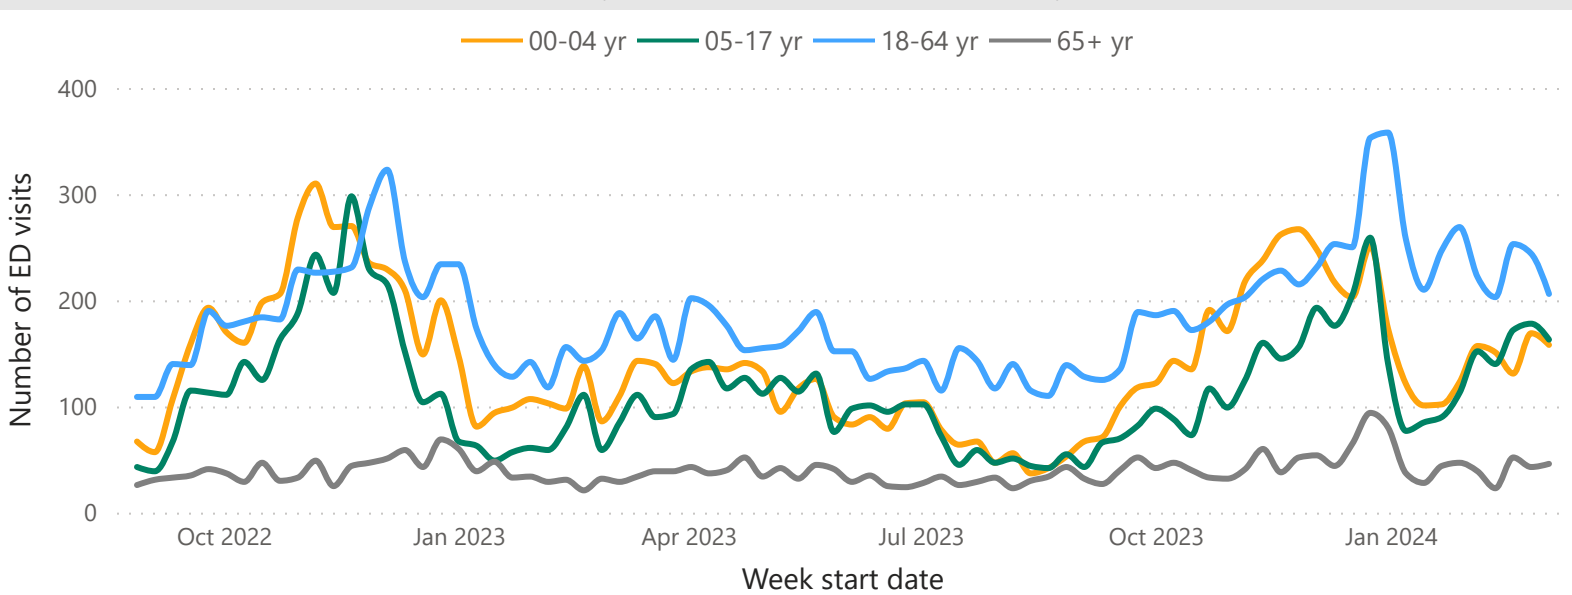

## Influenza Summary

Local metrics	Week 10 (Mar 3 - Mar 9, 2024)	Season to date (Aug 27, 2023 - Mar 9, 2024)	Trend (compared to previous week)
Laboratory-confirmed cases	36	698	Increased
Influenza sub-types	Influenza A: 12 Influenza B: 24 Influenza A and B: 0	Influenza A: 605 Influenza B: 92 Influenza A and B: 1	Decreased Increased Same
Deaths	0	9	Same
Active outbreaks	As of the end of Mar 11, 2024: 0		Decreased
Provincial metrics	Week 09 (Feb 25 - Mar 2, 2024)		
Local influenza activity level	Activity level: <b>Localized</b>		
Provincial test positivity	Percent of tests positive: 8.7% Positivity level: <b>Low</b>		
Provincial weekly indicator change	Similar		

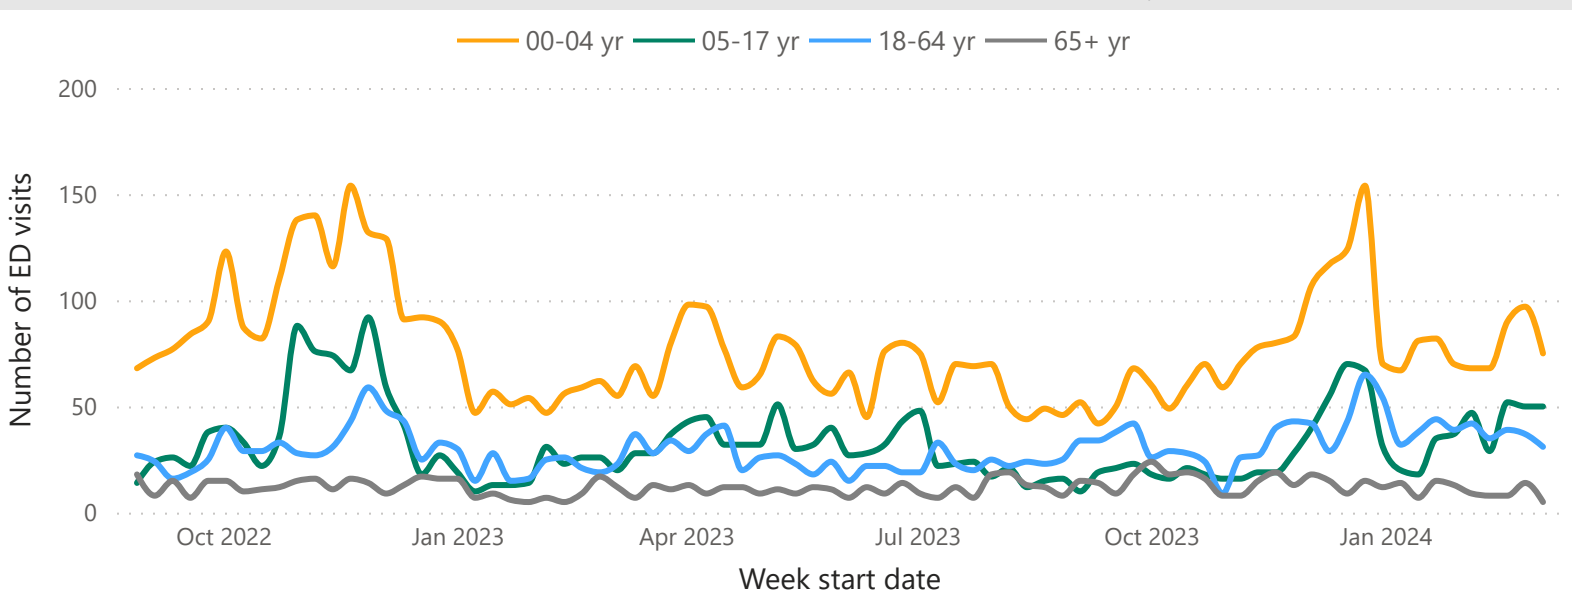

## Clinical Syndromic Surveillance

Data are from the *Acute Care Enhanced Surveillance (ACES)*. ACES provides near real-time surveillance of emergency department (ED) visit records for approximately 95% of acute care hospitals in Ontario. Classifying algorithms are used to categorize each ED visit record into clinical syndromes according to information about the main reason for the visit listed in the record. Respiratory-related syndrome and influenza-like illness visits to Middlesex-London region hospitals (regardless of the client's health unit of residence) are shown below. For more details about each syndrome, please refer to the *Technical Notes*.

Weekly ED visits due to respiratory syndrome by age group in Middlesex-London

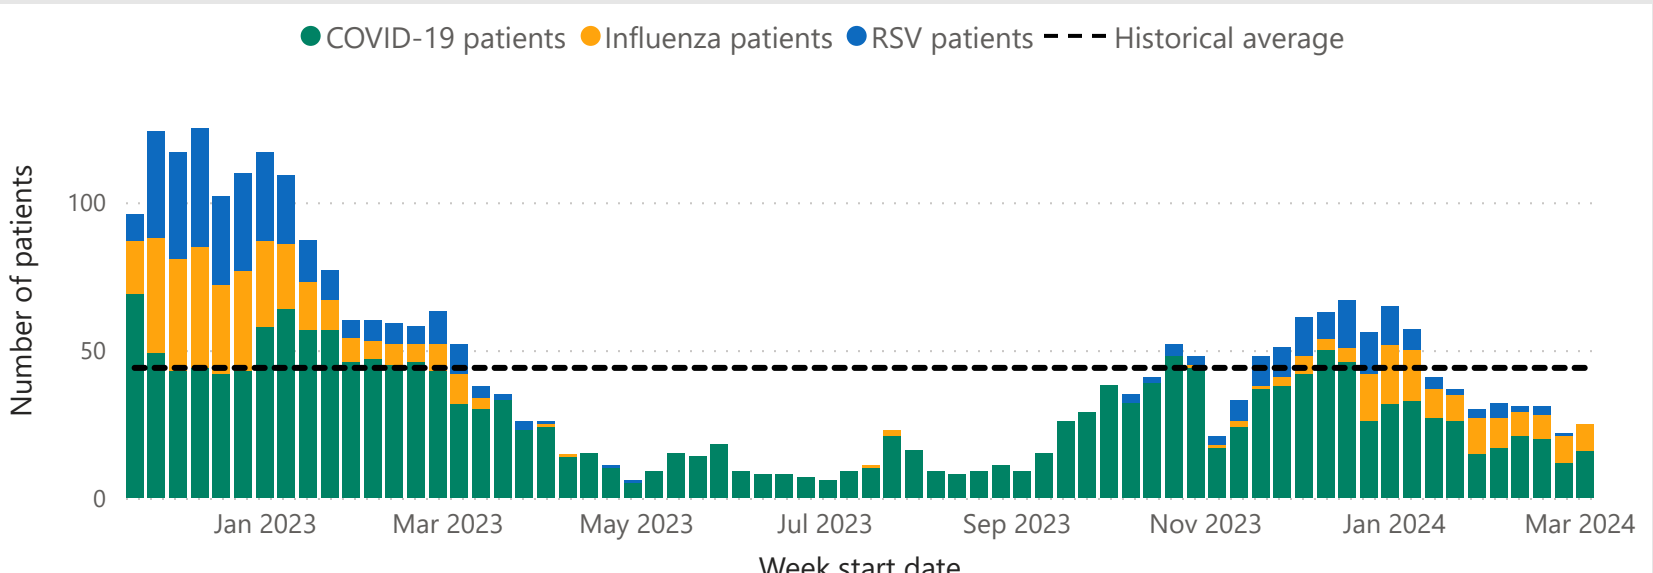

Weekly ED visits due to influenza-like illness (ILI) syndrome by age group in Middlesex-London

## Hospitalizations

Weekly average number of confirmed COVID-19, influenza and RSV patients in hospital, Middlesex-London
