

Middlesex-London Respiratory Surveillance Report

Last updated: 2024-04-30 12:00 PM

The data in this dashboard represent a snapshot in time and are subject to change as public health investigations into reported cases continue, and as ongoing data quality updates are undertaken, such as correcting for missing or overcounted cases and deaths. The number of cases reported on any given day may change as cases may be referred between jurisdictions or, following further investigation, individuals may no longer meet the case definition. The data shown here may differ from other sources as data may be extracted at different times.

Respiratory summary

COVID-19 cases

Influenza cases

Other respiratory viruses

Wastewater surveillance

Institutional outbreaks

COVID-19 vaccination

Technical notes

Respiratory Transmission Risk Assessment

Middlesex-London region is in a Non-High Risk Period for Respiratory Illness

Indicator	Status
1. New respiratory outbreaks in health care facilities	Low
2. Respiratory hospitalizations	Low
3a. % positivity for COVID-19	Low
3b. % positivity for influenza	Low
4. Wastewater surveillance trend of COVID-19	High

COVID-19 Summary

Local metrics	Week 17 (Apr 21 - Apr 27, 2024)	Season to date (Aug 27, 2023 - Apr 27, 2024)	Trend (compared to previous week)	
Laboratory-confirmed cases	8	2,773	Decrease	
Deaths	0	57	Same	
Active outbreaks	As of the end of Apr 29, 2024:		2	Increase
Local test positivity	Percent of tests positive: 4.4% Positivity level: Low		Decrease	
Provincial metrics	Week 16 (Apr 14 - Apr 20, 2024)			
Provincial weekly indicator change	Similar			

Influenza Summary

Local metrics	Week 17 (Apr 21 - Apr 27, 2024)	Season to date (Aug 27, 2023 - Apr 27, 2024)	Trend (compared to previous week)	
Laboratory-confirmed cases	4	803	Decrease	
Influenza sub-types	Influenza A: 1 Influenza B: 3 Influenza A and B: 0	Influenza A: 645 Influenza B: 157 Influenza A and B: 1	Decrease Decrease Same	
Deaths	0	9	Same	
Active outbreaks	As of the end of April 29, 2024:		0	Same
Provincial metrics	Week 16 (Apr 14 - Apr 20, 2024)			
Local influenza activity level	Activity level: Localized			
Provincial test positivity	Percent of tests positive: 3.9% Positivity level: Low			
Provincial weekly indicator change	Lower			

Clinical Syndromic Surveillance

Data are from the *Acute Care Enhanced Surveillance (ACES)*. ACES provides near real-time surveillance of emergency department (ED) visit records for approximately 95% of acute care hospitals in Ontario. Classifying algorithms are used to categorize each ED visit record into clinical syndromes according to information about the main reason for the visit listed in the record. Respiratory-related syndrome and influenza-like illness visits to Middlesex-London region hospitals (regardless of the client's health unit of residence) are shown below. For more details about each syndrome, please refer to the *Technical Notes*.

Weekly ED visits due to respiratory syndrome by age group in Middlesex-London

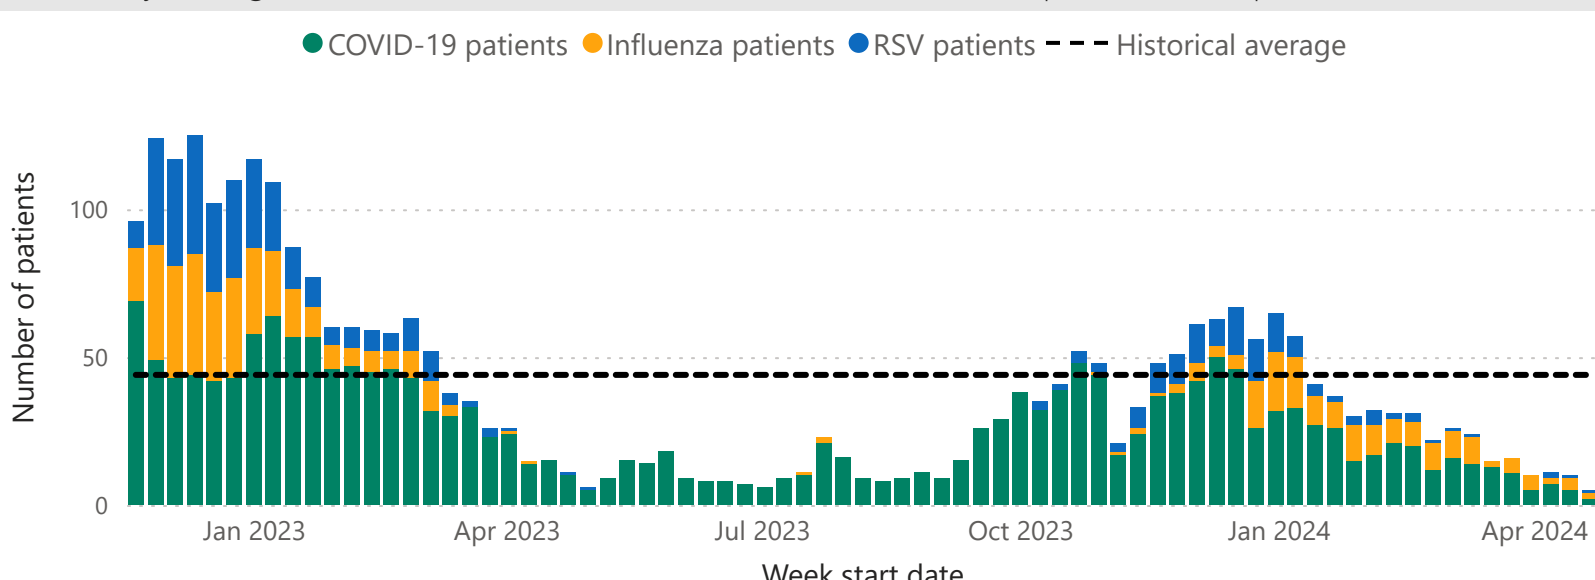

Weekly ED visits due to influenza-like illness (ILI) syndrome by age group in Middlesex-London

Hospitalizations

Weekly average number of confirmed COVID-19, influenza and RSV patients in hospital, Middlesex-London
